

Prompts — Lab 04: Publish the Site: GitHub Pages and Sites

Agentic AI Applications with Codex · Day 1 · Codex → GitHub Pages → @Sites

Surface: Codex → GitHub Pages → @Sites. Paste each prompt as written; change only what the lab tells you to.

PROMPT A — Codex

Commit and push this project to GitHub.

Before committing, list every file you will add and confirm there is no .env file, API key or sign-up export among them. Write a commit message that says why, not what. Push to main, then give me the Pages URL (<https://<your-user>.github.io/cook-and-bake/>).

PROMPT B — @Sites

@Sites Deploy this project as a static site. It is plain HTML, CSS and JavaScript with no backend. Check compatibility, publish it, set access to Only those invited, and give me the URL.
