

Lab 01 — Validate the Idea with Chat and Work

Agentic AI Applications with Codex · Day 1 · Chat → ChatGPT Work → @Sites

Course: Agentic AI Applications with Codex (TGS-2023041081)

Day 1 · Topic 1 · about 30 minutes · slides 27–33

Surface: Chat → ChatGPT Work → @Sites

Features: Chat brainstorm · Work research with plan review · @Sites HTML report

The story so far

Late August 2026. Grace has signed two kitchen leases and drafted 20 courses. Before she spends S\$8,000 on a website, her business partner wants proof: who will pay, how much, and which courses should launch first.

Your goal

Before building anything, find out whether Singapore will pay for these 20 courses — and at what price.

You'll build

A private HTML market report on Sites, and market-brief.md for Codex

What is in this folder

- assets/business-idea.md
- assets/courses.json
- assets/report-outline.md
- prompts.md / prompts.pdf — every prompt, ready to paste
- evidence/checklist.md — what to capture as proof

Step by step

1. **Pressure-test in Chat** — Paste Prompt A. Ten minutes: who pays, why now, what could sink it.
2. **Research in Work** — Switch to Work and paste Prompt B. Read the plan and change at least one step before approving.
3. **Audit the sources** — Every number needs a cited source and date. Mark anything uncited as UNKNOWN.
4. **Publish with @Sites** — Prompt C turns the research into a one-page HTML report. Set access to Only those invited.
5. **Write the brief** — Prompt D produces market-brief.md — save it into your cook-and-bake folder for Lab 2.

The prompts

PROMPT A — Chat

I'm launching Cook & Bake Academy Singapore:
20 hands-on cooking and baking courses (S\$160 to S\$1,580), two campuses, classes of 12.

Pressure-test the idea. In under 250 words:

- Who is most likely to pay, and why now?
- The three biggest risks to the business.
- The five questions my market research must answer before I spend money on a website.

PROMPT B — ChatGPT Work

Plan first, then research.

Research the market for hands-on cooking and baking classes in Singapore for Cook & Bake Academy. Our proposed catalogue is attached (courses.json).

Answer:

1. Who the customers are — 3 personas.
2. At least 5 named competitors, with course types and published price ranges.
3. Where our 20 fees sit against those ranges.
4. Demand signals and seasonality.
5. The 5 courses we should launch first, and why.

Cite every figure with its source and date. If a figure cannot be sourced, write UNKNOWN.
Show me the plan before you start.

PROMPT C — @Sites

@Sites Turn this research into a one-page HTML report titled "Cook & Bake — Market Validation".

Sections: summary, personas, competitor table, our fees against the market, demand and seasonality, the 5 launch courses, risks, and sources with links.

Keep it private: Only those invited.
Give me the Site URL when it is published.

PROMPT D — the brief for Codex

Summarise the research as market-brief.md for our website developer. Under 300 words:

positioning line, 3 personas, the 5 launch courses, pricing notes, and 3 things the website must do to convert visitors. Facts only from the report.

Check your work

- ☐ Chat returned five research questions you used in Prompt B.
- ☐ You changed at least one step of Work's plan before approving.
- ☐ The competitor table names 5+ real schools, each with a source.
- ☐ No uncited number appears — gaps say UNKNOWN.
- ☐ The HTML report is live on Sites and set to Only those invited.
- ☐ market-brief.md is saved in your cook-and-bake folder.

If it goes wrong

- **Sites option missing** — Sites is in beta for workspaces, Plus and Pro. Ask Work for an HTML file and open it locally instead.

Stretch

- Ask Work to add a "what would change our mind" section.

Why it matters: Research is only as good as its citations. A confident figure with no source is a guess.

Next

Lab 2 — Plan and Build the Site with /plan. Keep what you built — the next lab starts from it.

Safety

Use only this lab's synthetic data and your own accounts. Never paste a real API key, password or personal data into a prompt or a file. Every email address in the data must resolve to your own inbox. Nothing is published or sent without your explicit approval.
