

Prompts — Lab 10: Create Custom Codex Skills

Agentic AI Applications with Codex · Day 1 · Codex

Surface: Codex. Paste each prompt as written; change only what the lab tells you to.

PROMPT A — Codex

```
Use $skill-installer to install the attached  
'project-setup' skill.
```

```
Do not run the skill or build the project yet.  
Confirm the exact installed path and tell me when  
'project-setup' appears in this project's skill  
list. Do not write outside this project folder.
```

PROMPT B — Codex

```
$skill-creator Save what we just did as a  
project skill called kb-update.
```

```
It should trigger when a course is added, changed  
or withdrawn, or a fee, date, allergen or policy  
changes. Steps: update data/courses.csv first,  
then the kb/ brochure to match, then run  
npm run check. Never edit the golden questions to  
pass. Report files changed and the eval score.
```

PROMPT C — Codex

```
$skill-creator Create a project skill called  
course-brochure: given a course code, write a  
one-page A4 HTML brochure from data/courses.csv and the  
kb/ brochure only – photo, schedule, intakes, fee,  
what you learn, allergens, sign-up link. Stop and  
report if the two sources disagree.
```
