

Lab 17 — A Multi-Agent Content Studio

Agentic AI Applications with Codex · Day 2 · Codex (custom agents + custom skills)

Course: Agentic AI Applications with Codex (TGS-2023041081)

Day 2 · Topic 5 · about 45 minutes · slides 155–159

Surface: Codex (custom agents + custom skills)

Features: .codex/agents/*.toml · parallel subagents · the Lab 16 skills · reviewer agent

The story so far

Grace wants to post every day and start a YouTube channel, with no marketing staff. Set up a studio of five specialist agents that use her new marketing skills to plan, write, design and script a week of content — with a reviewer that catches mistakes.

Your goal

One agent writing everything produces one voice and no second opinion. Five specialists — with a reviewer at the end — produce a week of content fast and safely.

You'll build

content/week-01/: 7 posts, images, a YouTube video package and a review log

What is in this folder

- assets/agents/
- assets/post-performance.csv
- assets/content-pillars.md
- assets/youtube-brief.md
- assets/courses.json
- prompts.md / prompts.pdf — every prompt, ready to paste
- evidence/checklist.md — what to capture as proof

Step by step

1. **Load the agents** — In the cookbake-marketing project from Lab 16, copy agents/ to .codex/agents/.
2. **Read the agents** — Open each .toml: what it may do, which model, which sandbox.
3. **Run the studio** — Paste the prompt. Open each subagent thread from the activity feed as it works.
4. **Read the review** — The brand-reviewer must flag at least one problem. Confirm it was fixed.
5. **Make the video** — Film the shot list on a phone in the kitchen, or cut the \$imagegen storyboard frames with a voice-over in any video editor.
6. **Stage, do not publish** — Posts stay as files for a human to schedule.

The prompts

agents/copywriter.toml — one of five

```
name = "copywriter"
description = "Writes captions, hooks and hashtags
  for Cook & Bake social posts."
model = "gpt-6-luna"
sandbox_mode = "workspace-write"
developer_instructions = ""
Use $social-post and $brand-voice. Every
fee, date and course fact must come from
courses.json. Save each post to
content/week-01/posts/. Never publish.
""
```

PROMPT — Codex

Run the content studio for next week.

1. strategist: read post-performance.csv and content-pillars.md; plan 7 posts (platform, format, topic, course) and one YouTube video. Then in parallel:
 2. copywriter: all 7 posts with \$social-post.
 3. visual-director: one image per post with \$imagegen, following \$brand-voice.
 4. video-producer: the YouTube package with \$youtube-package from youtube-brief.md, including storyboard frames made with \$imagegen and a 30-second Short.
- Then:
5. brand-reviewer: check everything against courses.json and content-pillars.md; log issues and send fixes back.
- Save to content/week-01/. Publish nothing.

Check your work

- ☐ Five agent threads ran; you opened at least two.
- ☐ The strategist's plan cites what performed best.
- ☐ content/week-01/ holds 7 posts, 7 images and the video package.
- ☐ The reviewer logged at least one issue, and it was fixed.
- ☐ Every fee and date matches courses.json.
- ☐ The YouTube package has title, chapters, tags and a thumbnail.
- ☐ Nothing was published.

If it goes wrong

- **Agents not found** — They load at session start. Start a new chat after copying .codex/agents/.

Stretch

- Add a sixth agent: a community-manager that drafts replies to the 5 most likely comments.

Why it matters: Sora's app shut down in April 2026 and its API on 24 Sep 2026. Build video from a script and shot list — film it, or cut \$imagegen frames with a voice-over.

Next

Lab 18 — Lead Magnet, Newsletter and the Open-House Campaign. Keep what you built — the next lab starts from it.

Safety

Use only this lab's synthetic data and your own accounts. Never paste a real API key, password or personal data into a prompt or a file. Every email address in the data must resolve to your own inbox. Nothing is published or sent without your explicit approval.
