

Bounded Codex task

Outcome

Verify a local TaskBoard dashboard through a real browser and convert one visible defect into reproducible evidence.

Task prompt

Test the priority filter at desktop and mobile viewports. Capture the failing state, repair only the causal UI layer, and repeat the path.

Constraints

- Work only in the learner copy inside this lab.
- Preserve public behavior unless the task explicitly changes it.
- Do not change expected tests to force a pass.
- Do not access the network, external accounts, credentials or personal data.

Definition of done

The evidence includes pre-repair failure, scoped patch and passing desktop/mobile re-test.
