

Bounded Codex task

Outcome

Package a test-triage workflow as a reusable skill and measure trigger precision with positive and near-miss prompts.

Task prompt

Create a narrowly triggered skill for Python unittest failure triage. Include evidence requirements and test one prompt that must not trigger it.

Constraints

- Work only in the learner copy inside this lab.
- Preserve public behavior unless the task explicitly changes it.
- Do not change expected tests to force a pass.
- Do not access the network, external accounts, credentials or personal data.

Definition of done

The skill passes structural checks and its evaluation shows correct trigger and near-miss behavior.
